the walls (12,14). Two opposing side walls (12) are joined along a common connecting portion and the container has a duct (16), which has a uniform composition of materials along its entire length, between the two side walls (12). The duct (16) extends from the compartment to the outside of the container (10) and is sealed when the container is in an empty state before filling. A method and a device make the container and a method and a device fill the container.--

IN THE SPECIFICATION:

Please replace the paragraph beginning on page 1, line 2, with the following rewritten paragraph:

B2

--The present invention relates to a container, a method and a device for making a container, and a method and a device for filling a container.--

Please add the following paragraph after the paragraph ending on page 9, line 2:

B3

--Further scope of the applicability of the present invention will become apparent from the detailed description given hereinafter. However, it should be understood that the detailed description and specific examples, while indicating preferred embodiments of the invention, are given by way of illustration
